Subject: Cig Storage Temps

Sensitivity: Confidential

All,

During the 09 Jul conference call, we discussed the storage temps of the pharmacy where the study cigs are being kept, since the humidor can not hold all of the current studies inventory.

We keep the cigs in a pharmacy retention room. That room has limited access and is monitored for temp and relative humidity. Room stays at 68 F and approximately 40% relative humidity.

Let me know if you have questions.

Kim
